Carlos Cativo

Senior Backend Engineer & Tech Lead

cativo@cativo.dev · cativo23.kt@gmail.com · El Salvador (UTC-6) · EN/ES · cativo.dev · github.com/cativo23 · linkedin.com/in/carlos-cativo

SUMMARY

Tech Lead with 9 years building production backend systems, currently leading a team of 5 engineers at Blue Medical Guatemala. Replaced a single-script subscription charger with a fault-tolerant, multi-gateway payment service — now ~$500K USD/mo. Also built an electronic invoicing service with SAP integration and a multi-agent AI voice product from scratch. Stack-fluid across Laravel/PHP, TypeScript/NestJS, and Python/FastAPI. Open to Senior Backend, Tech Lead, and Staff roles — remote-first or with relocation sponsorship.

EXPERIENCE

Tech Lead / Full-Stack Engineer — Blue Medical

Apr 2022 — Present · Guatemala (Remote)

- Lead developer across payment, e-invoicing, subscription, and AI voice platforms — owned design, delivery, and on-call from greenfield to production.
- Built a Laravel payment microservice with a Strategy-pattern gateway abstraction over heterogeneous protocols (ISO 8583, SOAP/XML, REST). VGS card vault for PCI-friendly tokenization; network tokenization on top of the vault. Per-commerce / per-card-token routing, Horizon queues per gateway, Livewire ops dashboard. Led an OWASP-grade audit and ongoing security hardening.
- Shipped Guatemala FEL e-invoicing service through authorized providers with multi-establishment support, async processing on Horizon/Redis, SAP integration for results and credit notes, and a Livewire ops dashboard with response-time analytics.
- Tech lead for BlueMeds, a medication subscription platform: lifecycle, delivery scheduling, referral codes, Meilisearch catalog search, and integrations across ERP, support, messaging and payment systems.
- Primary author of sofIA, a multi-agent voice system on ElevenLabs ConvAI + n8n for appointment scheduling, currently in production. State-machine workflow with deterministic validation, retry, and recovery layers around tool calls. FastAPI control plane + Nuxt dashboard + Typer CLI.

Laravel, PHP, NestJS, FastAPI, Python, Livewire, Nuxt, Angular/Ionic, PostgreSQL, MySQL, Redis/Horizon, Meilisearch, AWS, Docker, Bitbucket Pipelines, Sentry, ElevenLabs ConvAI.

Backend Developer — OrangeSoftCo (Publimovil Regional)

Sep 2020 — Apr 2022 · El Salvador

- Re-architected the Y.O.D.A. monolith into microservices with Redis Streams for inter-service communication, improving end-to-end performance ~30%.
- Tightened GitLab CI/CD pipelines and Docker/K8s deploys on DigitalOcean, cutting build time ~20%.

Laravel, FastAPI, Python, MySQL, Redis Streams, Docker, Kubernetes, GitLab CI/CD.

Senior Developer — Mussol

Apr 2017 — Sep 2020 · El Salvador

- Built an internal dashboard administering 100+ travel websites; set up AWS-based CI/CD that improved deploy time and reliability. Also shipped C#/Unity mobile games (TripXpertz).

Laravel, MySQL, AWS, C#/Unity.

SELECTED PROJECTS

VittBot personal · in development — Multi-agent BTC/USDT trading bot on Binance: indicator pipeline feeds three Claude agents (Analyst, Trader, Validator) backed by a deterministic risk manager (10 hard-coded rules, never delegated to AI). *NestJS, TypeScript, Anthropic SDK, CCXT, Prisma + PostgreSQL.*

nova-id personal · in development — Zero Trust IAM stack using the Ory suite (Kratos, Hydra, Keto, Oathkeeper) with a NestJS admin API and Vue console. *Ory Stack, NestJS, Vue, Docker.*

Clarify personal · in development — AI legal-contract auditor (v1.0.0-alpha). PDF analysis, pay-per-analysis credits via Stripe webhooks, async processing on BullMQ. *Nuxt, Supabase (Postgres + RLS), OpenAI, Stripe, BullMQ + Redis.*

cativo.dev infrastructure — Self-hosted production stack (apps, blog, mail, monitoring, proxy, databases) on my own infrastructure. *Docker Compose, Linux, UFW, TLS, DNS.*

OPEN SOURCE · NPM

lumira ~580 dl/mo — Real-time statusline HUD for Claude Code and Qwen Code. Session analytics, latency overhead widget, quota projection. Zero deps. *TypeScript, npm.*

nightwire — Dark cyberpunk UI design system. Semantic color roles, neon palette, CLI installer. *CSS, npm.*

SKILLS

Languages	TypeScript, JavaScript, PHP, Python, Bash, SQL
Backend	NestJS, Laravel 10/11, FastAPI
Frontend	Nuxt/Vue, Angular, Ionic, Tailwind
Data	PostgreSQL (Prisma, SQLAlchemy, Eloquent), MySQL, Redis, Meilisearch, Supabase
AI / Integrations	Anthropic Claude API, OpenAI, ElevenLabs ConvAI, multi-agent design, n8n, Stripe, Odoo, SAP, WhatsApp/Botmaker, Bland AI
Payments / Tax	Multi-gateway integration over heterogeneous protocols (ISO 8583, SOAP/XML, REST), VGS card vault, network tokenization, FEL e-invoicing (Guatemala), SAP
Infra / DevOps	Docker, Traefik, Nginx, AWS (S3/ECR/EC2), Cloudflare, GitHub Actions, Bitbucket Pipelines, Prometheus, Sentry
Testing	Pest/PHPUnit, Vitest, Jest, BATS, TDD

EDUCATION

Universidad de El Salvador — B.Sc. Computer Systems Engineering, 2023. Specialization in Cloud Infrastructure.
